

HIREWISE

Business Requirements Document

AI-Powered Tech Recruitment & Interview Scheduling Platform

Document Information	Value
Document Version	1.0
Date	23 August 2026
Document Type	Business Requirements Document (BRD)
Project Status	Proposed / Planning
Primary Platforms	React Web + Flutter Mobile

1. Executive Summary

HireWise is a recruitment management platform focused on technical hiring. It is designed to help organizations manage job vacancies, candidate applications, resume information, candidate evaluation, interview preparation, interview scheduling, feedback, and hiring decisions through a single integrated platform.

The platform combines conventional recruitment management with Agentic AI assistance. Multiple specialized AI agents support job analysis, resume analysis, candidate evaluation and ranking, personalized interview-question generation, and interview scheduling. The AI provides recommendations and performs controlled multi-step tasks, while recruiters retain human authority over high-impact recruitment decisions.

HireWise will provide two connected client applications: a React web application for recruiters, interviewers, and administrators, and a Flutter mobile application for candidates and mobile recruitment workflows. Both clients operate on the same business platform, identity model, data, permissions, and business rules.

2. Business Problem / Opportunity

- Technical recruitment often requires recruiters to manually review large numbers of applications and resumes.
- Candidate information can be distributed across resumes, applications, interview records, and communication channels.
- Matching technical skills against job requirements can be time-consuming and inconsistent when performed manually.
- Interview preparation can rely on generic question banks rather than candidate-specific evidence and job requirements.
- Scheduling interviews can require repeated coordination between candidates, recruiters, and interviewers.
- Recruiters need a clear audit trail showing why a candidate was evaluated, recommended, approved, scheduled, or rejected.

Business Opportunity: HireWise can reduce repetitive recruitment work while improving consistency, traceability, candidate experience, and recruiter productivity through controlled AI-assisted workflows.

3. Business Vision and Objectives

Vision: Provide an intelligent and human-controlled recruitment platform that helps organizations move qualified technical candidates through the hiring process efficiently and transparently.

Objective	Business Outcome
Streamline recruitment operations	Reduce repetitive manual work across jobs, candidates, interviews, and communication.
Improve candidate matching	Provide structured, explainable AI recommendations based on job requirements and candidate information.
Improve interview preparation	Generate job- and candidate-specific interview questions for interviewers.
Simplify scheduling	Reduce coordination effort and scheduling conflicts.
Maintain human control	Require recruiter approval before defined high-impact recruitment actions.
Improve traceability	Maintain application, interview, AI workflow, approval, and audit histories.
Improve user experience	Provide role-specific experiences through web and mobile applications.

4. Stakeholders and User Groups

Stakeholder / User	Interest / Responsibility
Candidate	Find suitable technical jobs, apply, manage profile and resume, track applications, and manage interviews.
Recruiter	Own the recruitment process, manage vacancies and candidates, review AI recommendations, approve progression, schedule interviews, and manage hiring decisions.
Interviewer	Review assigned interviews, access approved candidate information and AI-generated questions, and submit interview feedback.
Administrator	Manage platform users, roles, organizations, platform settings, and audit information.
Organization / Employer	Use HireWise to manage technical recruitment activities and hiring pipelines.
Project Team / Evaluators	Assess whether the implemented system satisfies the approved business and academic requirements.

5. User Roles and Responsibilities

Role Decision: HireWise does not define a separate `HIRING_MANAGER` role. Hiring-manager capabilities are assigned to the Recruiter role.

Role	Primary Responsibilities
Candidate	Manage profile, maintain resume information, search jobs, apply, track applications, view interviews, and receive notifications.
Recruiter	Manage companies/departments/jobs, review applications, initiate AI workflows, review candidate evaluations, approve or reject recommendations, schedule interviews, manage interview outcomes, and manage hiring decisions.
Interviewer	Manage availability, view assigned interviews, review candidate/job information, access personalized questions, and submit feedback.
Admin	Manage users and role assignments, platform configuration, organization-level administration, and audit visibility.

6. Project Scope

6.1 In Scope

- Organization, department, and technical job management.
- Candidate registration, profile management, resume/document management, education, experience, projects, and certifications.
- Job discovery and candidate applications.
- Application status tracking and recruitment pipeline management.
- AI-assisted job-description analysis.
- AI-assisted resume analysis and structured candidate information extraction.
- AI-assisted candidate evaluation, suitability scoring, and ranking recommendations.
- Human review and recruiter approval of defined AI recommendations.

- AI-generated personalized technical, project, problem-solving, and behavioral interview questions.
- Interviewer availability and interview scheduling.
- Interview feedback and interview history.
- Notifications and recruitment status updates.
- Recruitment dashboards, reporting, and analytics.
- AI workflow monitoring and auditable execution summaries.
- Role-based access, validation, security controls, logging, and auditability.
- React web application and Flutter mobile application using the same business platform.

6.2 Out of Scope / Future Enhancements

- Fully autonomous final hiring decisions without recruiter approval.
- Payroll, employee onboarding, attendance, and post-hire HR management.
- A complete video-conferencing platform built inside HireWise.
- Training or developing a proprietary foundation LLM as part of the recruitment platform.
- Advanced workforce management after a candidate becomes an employee.
- Features outside the approved recruitment lifecycle unless added through formal scope change.

7. Product Concept and High-Level Solution

HireWise will provide a shared recruitment platform with role-specific experiences. The web application will primarily support recruitment administration, dashboards, candidate review, AI monitoring, scheduling, and approval activities. The Flutter application will primarily support candidate-facing and mobile operational workflows such as job discovery, applications, resume submission, application tracking, interview updates, and notifications.

Area	Primary Experience
React Web Application	Recruiter, interviewer, and administrator workflows; dashboards; recruitment operations; AI monitoring; approvals; scheduling; reporting.
Flutter Mobile Application	Candidate-facing workflows; job discovery; applications; resume/profile updates; interview tracking; notifications and mobile actions.
Shared Business Platform	Common identity, roles, permissions, business rules, recruitment data, application states, interview records, and workflow history.
Agentic AI	Controlled multi-step recruitment assistance with specialized agents, validation, human approval, and auditable execution.

8. Major Business Components

Component	Purpose	Representative Business Capabilities
1. Job & Company Management	Manage the organization-side structure and vacancies.	Companies, departments, job postings, skills, job requirements, publishing, closing, search, filters.
2. Candidate & Application Management	Manage people applying for technical roles and their application lifecycle.	Profiles, resumes, education, experience, projects, certifications, applications, status tracking.
3. Interview & Scheduling Management	Manage interview preparation, availability, scheduling, and feedback.	Interview slots, interviewer availability, scheduling, rescheduling, notifications, feedback, history.
4. Recruitment Intelligence & AI Workflow	Support recruiters with AI-assisted evaluation and monitored recruitment workflows.	Candidate ranking, recommendations, approvals, AI workflow monitoring, analytics, execution history.

9. Agentic AI Business Capabilities

HireWise will use a multi-agent AI workflow to support recruitment activities. The AI is intended to assist recruiters and interviewers rather than replace human decision-makers. Each agent has a defined responsibility, input/output expectations, and controlled participation in the workflow.

Agent	Business Purpose
Job Description Analysis Agent	Identify and structure required technical skills, qualifications, experience, and role requirements from a job description.
Resume Analysis Agent	Extract and structure candidate skills, experience, education, projects, and certifications from a resume.
Candidate Evaluation & Ranking Agent	Compare candidate information with job requirements and provide suitability scores and recommendations.
Validation Agent	Check AI outputs and recruitment decisions against defined data and business rules before progression.
Interview Question Generator Agent	Generate personalized interview questions based on the job, candidate experience, skills, and projects.
Interview Scheduling Agent	Recommend suitable interview slots by considering candidate/interviewer availability and scheduling constraints.

9.1 High-Level AI-Assisted Recruitment Workflow

1. Candidate submits an application for an open technical position.
2. HireWise analyzes the job requirements and candidate resume information.
3. The AI evaluates the candidate against the job requirements and prepares a structured recommendation.
4. Defined validation checks are applied to the recommendation.
5. The Recruiter reviews the recommendation and decides whether the candidate should progress.
6. After interview approval, HireWise generates a personalized interview question set.
7. The scheduling workflow identifies suitable interview options.
8. The Recruiter confirms the interview arrangement before the interview is finalized.
9. The Candidate and Interviewer receive the appropriate interview information and notifications.
10. After the interview, the Interviewer submits feedback and the Recruiter continues the hiring process.

Human-in-the-Loop Principle: AI recommendations are advisory. The Recruiter remains responsible for high-impact recruitment decisions such as progressing candidates and confirming interview arrangements.

10. High-Level Business Requirements

ID	Business Area	Requirement
BR-01	User Access & Identity	The platform shall support secure registration/sign-in and role-specific access for Candidates, Recruiters, Interviewers, and Administrators.
BR-02	Role & Permission Management	The platform shall enforce different responsibilities and permissions by user role. Hiring-manager capabilities shall be assigned to Recruiters.
BR-03	Company & Department Management	Recruiters/Admins shall be able to manage organizational structures used for recruitment.
BR-04	Job Management	Recruiters shall be able to create, update, publish, filter, search, and close technical job vacancies.
BR-05	Candidate Profile Management	Candidates shall be able to maintain their personal, educational, professional, project, certification, and resume information.
BR-06	Job Discovery & Applications	Candidates shall be able to browse suitable jobs and submit applications while the platform enforces application business rules.

ID	Business Area	Requirement
BR-07	Application Tracking	Candidates and Recruiters shall be able to view application status and history according to their permissions.
BR-08	AI Job Analysis	HireWise shall provide AI-assisted analysis of job descriptions and produce structured job requirements.
BR-09	AI Resume Analysis	HireWise shall provide AI-assisted extraction and structuring of candidate resume information.
BR-10	AI Candidate Evaluation	HireWise shall provide AI-assisted candidate evaluation and ranking recommendations against job requirements.
BR-11	Recruiter Approval	High-impact AI recommendations shall support explicit Recruiter approval, rejection, or revision.
BR-12	Interview Question Generation	HireWise shall generate personalized interview question sets based on approved interviews, job requirements, and candidate information.
BR-13	Interview Scheduling	The platform shall manage candidate/interviewer availability and support suitable interview scheduling and rescheduling.
BR-14	Interview Feedback	Interviewers shall be able to submit structured feedback and recruiters shall be able to review the results.
BR-15	Notifications	The platform shall provide recruitment and interview notifications relevant to each user role.
BR-16	Recruitment Analytics	Recruiters/Admins shall be able to monitor recruitment pipeline activity and key operational indicators.
BR-17	AI Workflow Monitoring	Authorized users shall be able to view workflow status, execution summaries, validation outcomes, approval decisions, and safe failures.
BR-18	Auditability	The platform shall maintain traceable history for important recruitment, approval, workflow, and administrative actions.
BR-19	Cross-Platform Consistency	React and Flutter clients shall use the same underlying business data, identity model, permissions, and business rules.
BR-20	Search, Filtering & Reporting	Relevant recruitment records shall support search, filtering, sorting, status views, and reporting appropriate to the role.

11. Key Business Workflows

11.1 Candidate Application Workflow

1. Candidate creates or updates a profile and resume.
2. Candidate searches available jobs.
3. Candidate opens a job and reviews requirements.
4. Candidate submits an application.
5. HireWise validates the application and stores the application status.
6. Recruiter sees the new application and may start AI-assisted evaluation.
7. Candidate can track the application status through the mobile or web experience available to them.

11.2 AI Candidate Evaluation Workflow

1. Recruiter selects an application for AI evaluation.
2. HireWise analyzes job requirements and candidate information.
3. The AI produces a structured candidate evaluation and recommendation.
4. Business and data validation checks are performed.
5. The result is stored as an auditable AI recommendation.
6. Recruiter reviews the recommendation and approves, rejects, or requests revision.
7. Only an approved recommendation may progress to the next controlled stage.

11.3 Interview Preparation & Scheduling Workflow

1. Recruiter approves a candidate for interview.
2. HireWise generates a candidate-specific interview question set.
3. Interviewers receive access to the approved question set.
4. Candidate and interviewer availability is considered for scheduling.
5. HireWise proposes a suitable slot.
6. Recruiter confirms the interview arrangement.
7. Candidate and interviewer receive the interview details.
8. Interviewer conducts the interview and submits feedback.

12. Business Rules

Rule ID	Business Rule
BRULE-01	A Recruiter is responsible for hiring-manager capabilities; no separate Hiring Manager role exists.
BRULE-02	Only open/published jobs may accept applications.
BRULE-03	A Candidate may not submit duplicate applications for the same job unless the organization explicitly permits reapplication.
BRULE-04	Candidate progression through the recruitment lifecycle shall follow approved status transitions.
BRULE-05	AI recommendations shall not automatically make final hiring decisions.
BRULE-06	High-impact recruitment actions requiring approval shall pause until an authorized Recruiter makes a decision.
BRULE-07	Interviewers may only access interviews and candidate information relevant to their assigned responsibilities.
BRULE-08	Interview schedules shall not create conflicting commitments for the same candidate or interviewer.
BRULE-09	Interview questions generated by AI shall be associated with the appropriate job/candidate/interview context.
BRULE-10	Invalid or unsupported AI outputs shall be rejected, revised, or safely failed rather than treated as valid business data.
BRULE-11	Important recruitment actions and approvals shall be traceable through history/audit information.
BRULE-12	User permissions shall be enforced consistently across the web and mobile applications.

13. Recruitment Lifecycle

Stage	Meaning	Typical Owner
APPLIED	Candidate has submitted an application.	Candidate / Recruiter
AI_REVIEW	Application is being analyzed by the recruitment AI workflow.	System
AI_RECOMMENDED	AI has produced a validated recommendation.	System / Recruiter
RECRUITER_REVIEW	Recruiter is reviewing the candidate recommendation.	Recruiter
INTERVIEW_APPROVED	Recruiter has approved the candidate for interview.	Recruiter

Stage	Meaning	Typical Owner
INTERVIEW_SCHEDULED	Interview has been confirmed.	Recruiter / System
INTERVIEW_COMPLETED	Interview has taken place.	Interviewer
EVALUATION_PENDING	Interview feedback or hiring review remains pending.	Recruiter / Interviewer
SELECTED	Candidate has been selected for the next/final hiring stage.	Recruiter
REJECTED	Candidate has been rejected at a controlled stage.	Recruiter

14. Web and Mobile Business Responsibilities

Platform	Primary Users	Business Purpose
React Web	Recruiters, Interviewers, Administrators, and optionally Candidates	Operations, dashboards, recruitment management, AI workflow monitoring, approvals, scheduling, reporting, interviewer workflows, and administration.
Flutter Mobile	Candidates and mobile users	Fast access to job discovery, applications, profile/resume actions, status tracking, interview details, and notifications.

Integrated Platform Requirement: The two applications are not separate products. They represent different user experiences over the same recruitment platform and must remain consistent in identity, permissions, business rules, and data.

15. High-Level External Integrations

Integration	Business Purpose
Authentication / Identity Service	Secure user identity, sign-in, and role-aware access.
Calendar / Scheduling Service	Support interview scheduling and calendar coordination.
Email / Notification Service	Deliver interview invitations, status updates, and recruitment notifications.
Cloud File Storage	Securely store resumes and recruitment documents where required.

16. High-Level Non-Functional Business Expectations

Area	Business Expectation
Security	Only authorized users can access recruitment information and perform permitted actions.
Privacy	Candidate information and documents shall be protected and only exposed to appropriate users.
Reliability	Recruitment workflows should fail safely and preserve relevant status/history.
Performance	Common user actions should provide responsive interactions; AI processes should communicate clear progress/state.

Area	Business Expectation
Usability	Interfaces should be understandable for recruiters, interviewers, candidates, and administrators.
Accessibility	User interfaces should follow accessible design practices where practical.
Auditability	Important recruitment and AI actions should be traceable.
Maintainability	Business rules and AI workflows should be structured so that they can be tested, modified, and monitored.
Scalability	The platform should support growth in jobs, candidates, applications, interviews, and AI workflow executions.

17. Reporting and Analytics Expectations

- Number of open, closed, and active job vacancies.
- Application volumes by job and time period.
- Candidate pipeline by application status.
- Interview counts and scheduling status.
- Candidate evaluation and recommendation summaries.
- Recruitment conversion indicators such as applications-to-interview progression.
- AI workflow success, failure, approval, and execution summaries for authorized users.

18. High-Level Business Acceptance Criteria

Area	Acceptance Expectation
Authentication & Roles	Users can securely access the platform according to their roles, and Hiring Manager permissions are available through Recruiter.
Recruitment Operations	Recruiters can create jobs, manage applications, review candidates, schedule interviews, and manage hiring progression.
Candidate Experience	Candidates can discover jobs, apply, maintain resume/profile information, and track recruitment progress.
Interviewer Experience	Interviewers can view assigned interviews, access approved candidate information/questions, and submit feedback.
Agentic AI	At least one complete recruitment workflow demonstrates multi-step planning/orchestration, distinct agent responsibilities, controlled tool use, validation, persisted workflow state, human approval, and an auditable result or safe failure.
Cross-Platform	A complete business flow can move between the mobile and web experiences while using the same underlying business platform.
Security & Audit	Unauthorized actions are blocked and important recruitment/AI actions are traceable.
Testing & Quality	Core business functions and the key AI workflow have automated tests and documented evaluation evidence.

19. Business Success Measures

Success Measure	Desired Outcome
Recruitment efficiency	Less manual effort is required to review, evaluate, and coordinate candidate workflows.
Candidate matching support	Recruiters receive useful structured recommendations aligned with job requirements.
Interview quality	Interviewers receive relevant, candidate-specific question sets.
Scheduling efficiency	Interview conflicts and manual coordination are reduced.
Decision traceability	Recruitment and AI recommendations have clear approval and history records.
User adoption	Recruiters, candidates, and interviewers can complete their primary tasks without unnecessary workflow complexity.

20. Assumptions, Constraints, and Dependencies

- HireWise is intended as an academic project and portfolio-quality prototype, with scope controlled to fit the approved academic timeline.
- The organization will provide or define suitable sample recruitment data for demonstration and testing.
- External services used for scheduling, notifications, authentication, or document storage may have usage limits and availability constraints.
- AI outputs may be imperfect; therefore validation, human approval, and safe-failure behavior are business requirements rather than optional features.
- Candidates and recruiters may access HireWise from different devices, so the two client applications must remain synchronized through the shared platform.
- The exact external service providers may be finalized during the software requirements and architecture stage without changing the business objectives of this BRD.

21. Business Risks and Mitigations

Risk	Potential Impact	Mitigation Direction
AI recommendation error	Poor candidate recommendation or inappropriate question generation.	Use deterministic validation, structured outputs, evaluation datasets, and recruiter approval.
AI bias / unfair recommendation	Unfair treatment of candidates.	Use transparent criteria, human oversight, defined validation rules, testing, and avoid using unnecessary sensitive attributes.
Scheduling conflicts	Missed or duplicated interviews.	Validate availability and conflict rules before confirming schedules.
Data privacy exposure	Candidate trust and compliance concerns.	Apply role-based access, protected storage, secure transport, and minimum-necessary data access.
External service outage	Notification or scheduling disruption.	Handle failures gracefully and provide recoverable workflow states.
Scope growth	Project delays and incomplete critical features.	Prioritize core recruitment workflow and defer non-essential enhancements.

22. Future Enhancement Opportunities

- Advanced candidate sourcing and talent-pool management.
- Additional assessment and coding-test integrations.
- Interview transcription and post-interview summarization.
- More advanced recruitment analytics and forecasting.
- Candidate communication automation with additional channels.
- Enhanced mobile-first recruiter capabilities.
- Expanded organization and multi-tenant management for larger deployments.

23. Glossary

Term	Meaning
Agentic AI	An AI system that can plan, delegate, use controlled tools, validate results, maintain workflow state, and perform multi-step tasks.
Recruiter	The primary hiring-organization user in HireWise and the role that also owns Hiring Manager capabilities.
Candidate	A person applying for a technical job through HireWise.
Interviewer	A person assigned to conduct and provide feedback on candidate interviews.
AI Workflow	A controlled sequence of AI and business steps used to support a recruitment objective.
Human Approval	An explicit decision by an authorized Recruiter before a defined high-impact action is finalized.
